PROTECT YOUR ENGINE WITH A NTF BYPASS FILTER

In January 2000, David Stufko installed an NTF Bypass Engine Filter on his rig to extend his oil drain interval and keep his engine clean. He didn't realize how valuable the filter would end up being.

Then in March 2001, he experienced a liner seal failure in cylinder #1. This was not detected immediately as the NTF filter was actually removing 100% of the glycol / water that was leaking directly into the crankcase and preventing damage.

The mechanics tore down the vehicle for repair only to find that nothing else was wrong and all the components were in exceptionally good condition even with 1.3M Kilometers on the engine.

The mechanics were totally amazed that the internal components of the engine were very clean and like new especially considering that he had a leaking liner seal, they had never seen this before and believed that it would not have been possible if it weren't for the NTF Filter. They figured that he was driving the truck for approximately 3-4 months while leaking coolant into the engine oil with no visible signs.

He decided while the engine was apart to do what they call and in-frame rebuild of the engine. **They re-assembled the engine using the original crankshaft & camshaft and gave him a 2 year warranty on those original components. Unheard of!**

Dave would never operate any truck without his NTF filter, as he has save \$10's of thousands of dollars because of his "NTF Filter System".

Update: August 2012. David just changed oil on his truck a couple of weeks ago and had an oil analysis done by Toromont Cat lab in Toronto with 104,000Km on the oil! His first oil change since Jan/12.. He now has a total of 2.3 million miles on his truck!!

David Stufko, 1995 Freightliner truck w/ Caterpillar Model 3406E Engine with the NTF Bypass Filter system now with 2,300,000 miles as of 2012.

NTF AL-29 Bypass Filter

Installs Safely and Easily to Any Diesel Engine and Brings Immediate Benefits

IMMEDIATE BENEFITS

- Reduction of maintenance expenses - extended oil drain
- Remove up to 78% of carbon build up in oil
- Remove up to 19% of soot
- Reduced oil consumption (blow by) by up to 60%
- Reduce fuel consumption by 3-4%
- Reduce Depletion of TBN by up to 50%
